DETAILED ACTION

1. This communication is in response to Remarks, filed 11/06/2006.
2. Claims 1-21 are pending in the application. Claims 1, 13, 17 and 21 have been amended. Claims 1, 13, 17 and 21 are independent.

Response to Arguments

3. Applicant's arguments filed 11/06/2006 have been fully considered but they are not persuasive.

The applicant argues (Remarks, page 7) that the amended claims 1, 13, 17 and 21 are statutory because the amended claims recite a practical application that produces a useful, concrete and tangible result. The examiner disagrees and argues that the amendment to the claims "...wherein an encoded bit stream is generated from the audio signal based on the groupings" does not provide the claims with a tangible result. Data, by definition, is intangible; so the claim must go further to have a tangible result. Thus, manipulation of data in a computer is not, in and of itself, sufficient for establishing that a claim is statutory. The encoded data must not be merely interpreted as a computation within a processor; the encoded data must be stored to a memory or displayed to the user to be tangible.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1, 13, 17 and 21 define non-statutory subject since the claims do not provide a tangible result. The result cited in the claims is an "...encoded bit stream..."; however, the encoded bit stream is not stored within a memory nor is it displayed to a user. Therefore, it does not create a "real world" result. (Also, see above arguments).

Claims 13-16 are further rejected as being non-statutory since they recite "a computer readable medium that provides instructions..." where the specification recites that a computer readable further encompasses a carrier wave. The computer readable medium must be physical structure, which provides the functional descriptive material in usable form to permit the functionality to be realized with the computer. A program product which does not explicitly include such a medium, a program per se, a signal or other type of transmission media that fails to include the hardware necessary to realize the functionality (e.g., a transmitter or a receiver), and a piece of paper with the functional descriptive material written on it are all examples of media which are not believed to enable the functionality to be realized with the computer.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
